

# Surface Prep and Coating Removal

The expertise and experience for a quality finish

## MULTIPLE LOCATIONS PROVIDE FLEXIBLE CAPACITY WITH ON-TIME DELIVERIES

AZZ Surface Technologies operates a network of facilities serving North America with highly automated, high capacity operations which have earned a significant number of certifications and accreditations for meeting the stringent quality standards of the industries we serve.

## The key to ensuring a quality, consistent finish

Surface preparation is critical to attaining a high-quality finish, whether it be powder or wet coating. AZZ Surface Technologies has extensive expertise in sandblasting, which efficiently and effectively smooths rough edges and repairs surface blemishes. Our sandblasting capabilities extend to parts as large as 40 feet in length, and our quality control measures, in accordance with our ISO 9001 certification, ensure an optimal surface for comprehensive and consistent coating.

## Assuring proper grounding and uniform coverage

One aspect of our quality control is the daily stripping of the hooks, racks, fixtures, and steel parts used in our operations. The process ensures the proper grounding and consistent coverage of the parts to be coated the following day. The stripping of organic paint and powder coating from parts and fixtures is a service we also offer to our customers.

## Coating removal expertise with fast turnaround capabilities

AZZ Surface Technologies' coating removal services including paint removal and stripping for a variety of materials including steel, stainless steel, iron, castings, carbon steel, alloy steel, aluminum, brass, copper, pot metals and superalloys. With AZZ's commitment to quality, we can meet and exceed the standards of a wide range of industries. These include but are not limited to Aerospace, Automotive, Architectural, Telecommunications, as well as Oil & Gas.

With our experience across a multitude of industries, metals, and coatings, our team has the expertise and capabilities to meet your needs:

- Thermal Cleaning (Burn-off)
- Chemical Immersion
- De-Rusting or Rust Removal
- Power Washing
